Dear Hiring Managers,

I am a passionate software engineer who loves to work with others. I have various experience in coding as I have tackled many coding projects. I specialize in front end development so I have various experience with HTML, CSS, JavaScript, and React.js while also being very attentive to details. However, I went through a Full-Stack web development bootcamp at the University of California Irvine, so I am proficient in all levels of stacks, making me able to read, help debug, and write codes at any level. I have numerous experience working with Git repositories and commands, backend servers like Node.js and JQuery, and cloud servers like SQL and MongoDB. I am always curious, so I love to learn and work with others.

I have experience with front end and back end development through the various projects I worked on. I am always prepared to learn and take advice from others because I am always curious. I love collaborating with others, mainly due to the fact that I can learn from and with them. Working with teams allows me to work more efficiently as I am able to express myself better with others around. I love to challenge myself because I am always looking to push myself to be better at coding. If I am introduced to something new, I am a very fast learner, being able to use my experience and learning habits to easily pick up new concepts.

I am actively searching for a job and would love to work for any company that sees my value. I would love to get the opportunity to introduce myself more during an interview. Please let me know if there is any question or would like to see any specific project samples. I can be reached by phone at (714) 353-2275, via text or call, or by email at [stevetongbsa@yahoo.com](mailto:stevetongbsa@yahoo.com). Thank you for your time and consideration.

Sincerely,

Steve Tong
